

Variant: *NM_000277.2(PAH):c.963C>T (p.Leu321=)*

Version: 1.0

[CA229873](#)

[102911 \(ClinVar\)](#)

Gene: PAH ([HGNC:5053](#))

Condition: phenylketonuria ([MONDO:0009861](#))

Inheritance Mode: Autosomal recessive inheritance

UUID: 31e57f08-7be8-46c7-902d-8429b753f57c

Approved on: 2018-07-29

Published on: 2019-04-06

[Criteria Specifications for this VCEP](#)

Evidence submitted by expert panel

Phenylketonuria VCEP

PAH-specific ACMG/AMP criteria applied: BS1: >0.02% as set by the PAH specific specifications; BP7: ; BS3_Supporting: cDNA method demonstrates 98% and intinic system demonstrates 81% residual enzyme activity; BS2: 38 homozygotes in gnomAD. In summary this variant meets criteria to be classified as benign for phenylketonuria in an autosomal recessive manner based on the ACMG/AMP criteria applied as specified by the PAH Expert Panel: (BS1, BP7, BS3_Supporting, BS2).

Met criteria codes

BS3_Supporting	✓	cDNA method demonstrates 98% and intinic system demonstrates 81% residual enzyme activity
BS2	✓	38 homozygotes in gnomAD
BS1	✓	>0.02% as set by the PAH specific specifications
BP7	✓	No code specific comments provided, please refer to the summary above or general recommendations provided in the guideline
